MICROELECTRONICS COMMONS

One network. A common operating system.

The current and proposed COMMONS organizational structure, the ARI network administrator (franchise) model, and two pathways to a microelectronics marketplace.

PREPARED FOR

The Honorable Mike Dodd

ASW(CT) / OUSW(R&E)

TODAY

Current COMMONS organizational structure

Five regional Tech Hubs connect directly to the consortium manager, and each one runs its own operating model.

HOW IT WORKS TODAY

- **NSTXL** is the consortium manager and executes COMMONS through the **S2MARTS OTA**.
- **Regional Hubs** connect directly to NSTXL as the technical execution hubs.
- **CT Leads** provide domain-specific technology governance and technical alignment as an external advisory arm.
- The Hubs were stood up **independently**, each with its own organization, leadership, relationships, capabilities, and priorities.

- Executive & program oversight
- NSWC Crane team
- Consortium manager
- CT Leads (advisory)
- Hub partner

THE RESULT

Individual Hubs

Individual operating models

Individual systems

PROPOSED

Proposed COMMONS organizational structure

ARI becomes the network administrator (the franchisor) inside a MAIN boundary, directly above all regional Hubs.

WHAT CHANGES

- **ARI becomes the network administrator**, providing a common operating system for every Hub inside the MAIN boundary.
- **ARI dissolves its standalone Hub role.** SCMC's capabilities become a platform that supports the entire network, and **NEMC** continues as the regional Hub.
- **Only shared functions are centralized.** Each Hub keeps its identity, leadership, expertise, membership, and relationships.

WHAT STAYS THE SAME

- Government oversight, the NSWC Crane team, NSTXL execution through S2MARTS, and CT Leads' governance

THE RESULT

Individual Hubs

Common network platform

Shared services & infrastructure

THE FRANCHISE MODEL

A common operating system for the Microelectronics Hubs

The Hubs grew up independently. A network-level administrator gives them one way to operate while each Hub stays independent.

SLIDE 01

Purpose and context

Purpose

Establish a common "franchise model" so the Microelectronics Hubs operate more consistently, efficiently, and in a structured way.

Context

The Hubs were created independently, each with its own organization, leadership, relationships, capabilities, and priorities.

Recent lesson

Consolidating eight Hubs into five showed how hard alignment is.

HUB CONSOLIDATION

8 → 5

Hubs after consolidation. Getting them aligned was the hard part, and it showed that the network needs a common way of operating.

SLIDE 02

The administrator model

Proposal

Designate one organization as a network-level administrator that provides a common operating system for all Hubs.

Independence preserved

Hubs keep their identities, expertise, memberships, and relationships. Only shared functions are centralized.

Focus: centralize what benefits from consistency and scale, not the Hubs themselves.

HUBS STAY INDEPENDENT · SHARED FUNCTIONS ARE CENTRALIZED

THE FRANCHISE MODEL

Why ARI, and what it would run for the network

ARI already runs this model. It would move its SCMC capabilities out of a standalone Hub and into a platform that serves every Hub.

SLIDE 03

Why ARI fits: existing model and capabilities

Track record

ARI already coordinates through the DIU on-ramp model, providing:

- ✓ Common playbooks & SOPs
- ✓ Reporting & data
- ✓ Events & communications
- ✓ Mission & opportunity pipelines
- ✓ Validation pathways
- ✓ Resource & investment coordination

SCMC as the platform

ARI's SCMC capabilities can move from a standalone Hub to a platform that supports the entire network. ARI would dissolve its Hub role to serve as administrator.

ARI'S ROLE SHIFTS

TODAY
SCMC: a standalone Hub

PROPOSED
Platform for the entire network

SLIDE 04

Shared services under the common operating system

Operating model

Shared playbooks, SOPs, service definitions, and processes.

Data and reporting

Common metrics, pipeline visibility, and performance reporting.

Communications and events

Coordinated national programming and stakeholder engagement.

Opportunity pipeline and validation

Visibility into DoD needs and into funding and acquisition pathways, plus standardized validation.

Investment and marketplaces

Coordinated access to private capital, plus shared platforms for technologies, companies, and manufacturing capabilities.

THE FRANCHISE MODEL

Hubs stay distinct. The network goes national.

No Hub is centralized. The network gets a common operating system, and the government gets shared visibility across all of it.

SLIDE 05

What does not change: Hub autonomy and national reach

Autonomy

No Hub is centralized. Each one keeps:

✓ Identity

✓ Leadership

✓ Expertise

✓ Membership

✓ Relationships

✓ Areas of focus

National orientation

Many Hubs already operate nationally. A network administrator reinforces that and keeps the Hubs from becoming regional silos.

Local to national

Regional Hubs such as CLAWS and Nwai connect local strengths to national opportunities through the network.

SLIDE 06

End state and value to government

TODAY

system becomes
common

VALUE TO GOVERNMENT

Shared visibility & infrastructure

Common processes

Broader access to technologies & companies

Coordinated validation

Better investment connections

Clearer acquisition & adoption pathways

MARKETPLACE & TIMELINES

Where the CFP stands, and two paths to a marketplace

The COMMONS Call for Proposals is moving toward award. In parallel, R&E can buy microelectronics through a marketplace in one of two ways.

COMMONS Call for Proposals: proposal & award timeline

OPTION 1 · SEE PAGE 08

Stand up a DoW Microelectronics Marketplace

GO LIVE
60 days

COST
\$3M / yr

CONTRACTING
Sole-sourceable

On contract → stand up the marketplace

◆ Live

DAY 0 DAY 30 DAY 60

APPROACH	Stand up an independent, brand-new DoW marketplace
CONTRACTING	Our marketplaces are sole-sourceable, so getting on contract is straightforward
FUNDING	Requires some funding for projects to back a new marketplace

\$3M per year for a brand-new program, live **60 days** after getting on contract.

OPTION 2 · SEE PAGE 09

APEX path: A&S Microelectronics + R&E topic sponsor

GO LIVE
Dec 1

COST
~\$400K

FIRST BUY
Feb 1

APPROACH	Use APEX, where A&S already has a microelectronics category
R&E ROLE	Topic sponsor: adds funding to drive topics or shopping notices
BUYER	NSTXL could still perform the buy

~\$400K one-time setup fee. Live **December 1**, with the first buy on **February 1**.

— OPTION 1 · START YOUR OWN MARKETPLACE

Stand up a DoW Microelectronics Marketplace

Stand up an independent effort: a dedicated marketplace for microelectronics, live 60 days after it goes on contract.

TIME TO GO LIVE

60 days

From getting on contract

ANNUAL COST

\$3M/yr

For a brand-new program

CONTRACTING

Sole-sourceable

 OVERVIEW

Stand up an **independent DoW Microelectronics Marketplace**. Our marketplaces are sole-sourceable, so **getting on contract is straightforward**. Once on contract, it takes **60 days to go live**.

 KEY ELEMENTS

- ✓ **Project funding required:** some funding is needed for projects to back a new marketplace.
- ✓ **Annual cost:** \$3M per year for a brand-new program.
- ✓ **Timeline:** go live 60 days after getting on contract.

TIME TO GO LIVE

On contract → stand up the marketplace

 Live

DAY 0

DAY 30

DAY 60

 HOW IT WORKS

1

CONTRACT

Get on contract by sole source

Our marketplaces are sole-sourceable, so contracting is straightforward.

2

DAYS 0 – 60

Stand up the marketplace

Build a dedicated DoW Microelectronics Marketplace as an independent effort.

3

DAY 60

Go live

The marketplace opens for microelectronics technologies and companies.

4

ONGOING · \$3M / YR

Operate and fund projects

Run the program and fund the projects that back the new marketplace.

BOTTOM LINE

A fully independent program, contracted by sole source and live in 60 days. It carries a \$3M annual cost and needs project funding behind it.

— OPTION 2 · USE THE APEX MARKETPLACE

The APEX path: A&S Microelectronics + R&E topic sponsor

Build on the APEX Marketplace, where A&S already has a microelectronics category. R&E adds funding to drive topics or shopping notices.

APEX GOES LIVE

Dec 1

First collection opens

ONE-TIME SETUP

~\$400K

Setup fee, paid once

FIRST TO BUY

Feb 1

After January assessment

🕒 STRUCTURE & TIMELINE

1

DECEMBER 1

Go live with the first collection

APEX opens with the A&S microelectronics category. R&E funding drives topics or shopping notices.

2

JANUARY

Assessment

Submissions are assessed, with an option for a 30-day assessment window.

3

FEBRUARY 1

First to buy

First purchases can be made off the marketplace.

In parallel: R&E/CT can run a special topic alongside the first collection.

⚙️ PROCESS ADJUSTMENTS (OPTIONAL)

The submission format can be adjusted to add rigor if required:

- ✓ 5-minute video + white paper submission
- ✓ 30-day assessment window

🛒 WHO PERFORMS THE BUY

NSTXL could still perform the buy. There's precedent on Tradewinds:

MARKETPLACE
Tradewinds

SPECIAL TOPICS

PERFORMED THE BUY
ATI

⚖️ HOW IT COMPARES WITH OPTION 1

	OPTION 2 · APEX	OPTION 1 · OWN MARKETPLACE
GO LIVE	Dec 1	60 days after getting on contract
COST	~\$400K one-time	\$3M per year
PLATFORM	Existing A&S category	Brand-new program

BOTTOM LINE

Uses the existing A&S microelectronics category on APEX. It goes live December 1 for a ~\$400K one-time setup fee, with the first buy on February 1.

Hubs stay distinct.
The network becomes national.
The operating system becomes common.

A common network platform gives the Department shared visibility and infrastructure, common processes, and broader access to technologies and companies. It also brings coordinated validation, better investment connections, and clearer acquisition and adoption pathways.
